

3.1 From requirements to a file

This compose example turns a long list of requirements into configuration. Its eighty lines exercise code-block pagination without relying on real services.

```
version: "3.9"

services:

  service01:

    image: example/service01:latest

    restart: unless-stopped

  service02:

    image: example/service02:latest

    restart: unless-stopped

  service03:
