

PARAGRAPH GAP FIXTURE

This paragraph is written to wrap to at least five lines at eight-point Spectral on A4. It restates the same idea with extra clauses so the print layout cannot collapse it into a short block. Keep counting words until the rendered height crosses three line-equivalents and then some more. Another sentence about household keep-versus-noise lists sits here as padding for the classifier. The last sentence confirms the paragraph is long enough for the adjacent-long-paragraph gap rule.

This paragraph is written to wrap to at least five lines at eight-point Spectral on A4. It restates the same idea with extra clauses so the print layout cannot collapse it into a short block. Keep counting words until the rendered height crosses three line-equivalents and then some more. Another sentence about household keep-versus-noise lists sits here as padding for the classifier. The last sentence confirms the paragraph is long enough for the adjacent-long-paragraph gap rule. Second copy of the long paragraph so two long neighbours get a one-line gap.

This intro is only two short sentences. It must stay tight against the following long paragraph.

This paragraph is written to wrap to at least five lines at eight-point Spectral on A4. It restates the same idea with extra clauses so the print layout cannot collapse it into a short block. Keep counting words until the rendered height crosses three line-equivalents and then some more. Another sentence about household keep-versus-noise lists sits here as padding for the classifier. The last sentence confirms the paragraph is long enough for the adjacent-long-paragraph gap rule. The long neighbour after a short intro must stay compact.
